misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks

Myelin Repair and Neuroprotection in Multiple Sclerosis presents an up-date on the translational potential of promoting remyelination in multiple sclerosis (MS). A number of research frontiers still exist in this challenging disease. The cause remains elusive, preventing breakthroughs in its prevention. The move towards oral immunomodulatory therapies has been a major advance, as has the finding of new genes linked to susceptibility that may open the door to new therapeutic approaches. However, a frontier that has been making significant strides in recent years has been that surrounding the neurobiology of myelin regeneration and axon protection: such have been the advances that clinical translation is on the cusp of being achieved. Two broad approaches to therapeutic enhancement of

remyelination are envisaged: promoting endogenous remyelination by targeting cells present in the CNS, or, replacing lost myelinating cells from exogenous sources. Current research on oligodendrocyte biology, the pathology of MS, imaging of lesions and the biology of remyelination are paving the way toward opening this new translational frontier. Professor Duncan and Professor Franklin have assembled a broad group of experts in the fields of glial cell biology, neuropathology, radiology and clinical neurology to provide the background toward taking remyelination from experimented models into MS patients.
