Master the technological tools of today's accounting profession In your grandfather's day, the ledger book was the accountant's bible. Today, technology is king. From simple programs such as UBS and MYOB to complex enterprise-level systems, accounting systems play a critical function in maintaining accounting data and administering internal controls in any organization. Many AIS textbooks do not explain the basic structure of an entire accounting information system. When students finish this textbook, they will really understand an accounting system. Some books focus more on technology topics than basic accounting system topics. Few accounting graduates will apply for jobs to build databases. Most will be users, auditors, and implementers of accounting systems and need to understand how accounting software works. As a result, this book has a practitioner emphasis, not a systems development emphasis as do many accounting textbooks. Intended to meet the needs of a first course in accounting information systems at either the undergraduate or graduate level, this textbook may also be used as a review text in second or subsequent courses in this area.

Owners and managers rely on today's accounting professional to identify and monitor enterprise risks and to provide quality assurance for a company's information systems. ACCOUNTING INFORMATION SYSTEMS, 10E focuses on three critical accounting information systems in use today: enterprise systems, e-Business systems, and controls for maintaining those systems. The text fully explores the integrated nature of AIS with its foundations in information technology, business processes, strategic management, security, and internal controls. Students will easily grasp even the most challenging subjects as they explore today's most intriguing AIS topics discussed in a conversational and relaxed tone rather than complex technical language. The tenth edition provides students with the necessary tools for organizing and managing information to help them succeed and protect the integrity of their employer's information system.
