Do you really think you are getting a good deal when given that free mobile phone for switching service providers, if a multinational retailer undercuts its competitors or by the fact that food is relatively cheaper today in many countries than ever before? Think again! As Michael Carolan clearly shows in this compelling book, cheapness is an illusion. The real

# Online Library Cheaponomics The High Cost Of Low Prices

cost of low prices is alarmingly high. It is shown for example that citizens are frequently subsidising low prices through welfare support to poorly-paid workers in their own country, or relying on the exploitation of workers in poor countries for cheap goods. Environmental pollution may not be costed into goods and services, but is paid for indirectly by people living away from its source or by future generations. Even with private cars, when the total costs of this form of mobility are tallied it proves to be an astronomically expensive model of transportation. All of these costs need to be accounted for. The author captures these issues by the concept of "cheaponomics". The key point is that costs and risks are socialised: we all pay for cheapness, but not at the point of purchase. Drawing on a wide range of examples and issues from over-consumption and waste to over-work, unemployment, inequality, and the depersonalising of communities, it is convincingly shown that cheapness can no longer be seen as such a bargain. Instead we need to refocus for a better sense of well-being, social justice and a balanced approach to prosperity.

This thought-provoking but accessible book critically examines the dominant food regime on its own terms, by seriously asking whether we can afford cheap food and by exploring what exactly cheap food affords us. Detailing the numerous ways that our understanding of food has narrowed, such as its price per ounce, combination of nutrients, yield per acre, or calories, the book argues for a more contextual view of food when debating its affordability. The first edition, published in 2011, was widely praised for its innovative approach and readability. In this new edition the author brings all data and citations fully up to date. Increased coverage is given to many topics including climate change, aquaculture, financialization, BRICS countries, food-based social

# Online Library Cheaponomics The High Cost Of Low Prices

movements, gender and ethnic issues, critical public health and land succession. There is also greater discussion about successful cases of social change throughout all chapters, by including new text boxes that emphasize these more positive messages. The author shows why today's global food system produces just the opposite of what it promises. The food produced under this regime is in fact exceedingly expensive. Many of these costs will be paid for in other ways or by future generations and cheap food today may mean expensive food tomorrow. By systematically assessing these costs the book delves into issues related, but not limited, to international development, national security, healthcare, industrial meat production, organic farming, corporate responsibility, government subsidies, food aid and global commodity markets. It is shown that exploding the myth of cheap food requires we have at our disposal a host of practices and policies.

Over the last three decades there has been a rapid expansion of intensive production of fresh fruit and vegetables in the Mediterranean regions of south and west Europe. Much of this depends on migrating workers for seasonal labour, including from Eastern Europe, North Africa and Latin America. This book is the first to address global agro-migration complexes across the region. It is argued that both intensive agricultural production and related working conditions are highly dynamic. Regional patterns have developed from small-scale family farming to become an industrialized part of the global agri-food system, which increasingly depends on seasonal labour. Simultaneously, consumer demand for year-round supply has caused relocations of the industry within Europe; areas of intensive greenhouse production have moved further south and even into North Africa. The authors investigate this Mediterranean

# Online Library Cheaponomics The High Cost Of Low Prices

agri-food system that transcends borders and is largely constituted by invisible seasonal work. By revealing the story of food commodities loaded with implications of private profit seeking, exploitation, exclusion and multiple insecurities, the book unmaskes the hidden costs of fresh food provisioning. Three case study areas are considered in detail: the French region of Provence, a traditional centre of fresh fruit and vegetable cultivation; the Spanish Almería region where intensive production has, accelerated dramatically since the 1970s; and Morocco where counter-seasonal production has recently been expanding. The book also includes commentaries that refer to complemetary insights on US-Mexico, Philippines-Canada and South Pacific mobilities.

In this second edition of *The Sociology of Food and Agriculture*, students are provided with a substantially revised and updated introductory text to this emergent field. The book begins with the recent development of agriculture under capitalism and neo-liberal regimes, and the transformation of farming and peasant agriculture from a small-scale, family-run way of life to a globalized system. Topics such as the global hunger and obesity challenges, GM foods, and international trade and subsidies are assessed as part of the world food economy. The final section concentrates on themes of sustainability, food security, and food sovereignty. The book concludes on a positive note, examining alternative agri-food movements aimed at changing foodscapes at levels from the local to the global. With increased coverage of the financialization of food, food and culture, gender, ethnicity and justice, food security, and food sovereignty, the book is perfect for students with little or no background in sociology and is also suitable for more advanced courses as a comprehensive primer. All chapters include learning objectives, suggested discussion questions, and

# Online Library Cheaponomics The High Cost Of Low Prices

recommendations for further reading to aid student learning.

Food is a contentious and emotive issue, subject to critiques from multiple perspectives. Alternative food movements – including the different articulations of local, food miles, seasonality, food justice, food knowledge and food sovereignty – consistently invoke themes around autonomy, sufficiency, cooperation, mutual aid, freedom, and responsibility. In this stimulating and provocative book the authors link these issues to utopias and intentional communities. Using a food utopias framework presented in the introduction, they examine food stories in three interrelated and complementary ways: utopias as critique of existing systems; utopias as engagement with experimentation of the novel, the forgotten, and the hopeful in the future of the food system; and utopias as process that recognizes the time and difficulty inherent in changing the status quo. The chapters address theoretical aspects of food utopias and also present case studies from a range of contexts and regions, including Argentina, Italy, Switzerland and USA. These focus on key issues in contemporary food studies including equity, locality, the sacred, citizenship, community and food sovereignty. Food utopias offers ways forward to imagine a creative and convivial food system.

Anthropogenic changes in the environment, caused by 250 years of economic growth and utilization of fuel and mineral resources, have considerably impacted the natural environment. The resulting physical and chemical alterations to the Earth's sphere and our adaptive responses in the biosphere are detailed in this reference book. Readers will learn about concepts relevant to Earth's history, the evolution of life, economy, ecology, environmental history, biology, and medicine and how these concepts can be linked to

# Online Library Cheaponomics The High Cost Of Low Prices

environmental change. The scope of this interdisciplinary work entails to convey the true degree of responsibility for the universal consequences of ecosystem degradation resulting from industrial processing, human consumption and the transformation of natural sites due to industrialization and urbanization. Topics covered in the book include: -ecosystem transformations by natural and anthropogenic forces -the Anthropocene epoch -a short history of industrialization -environmental sites and the impact of socio-economic influences -the current environmental crisis, This textbook is intended for graduate students in economics, civil engineering, architecture, agronomics, forestry, technical and mining sciences, political sciences, business studies and humanities. General readers who wish to understand the basic philosophy behind environmental studies and their relation to human activity can also benefit from this book.

The growth of the global meat industry and the implications for climate change, food insecurity, workers' rights, the treatment of animals, and other issues. Global meat production and consumption have risen sharply and steadily over the past five decades, with per capita meat consumption almost doubling since 1960. The expanding global meat industry, meanwhile, driven by new trade policies and fueled by government subsidies, is dominated by just a few corporate giants. Industrial farming—the intensive production of animals and fish—has spread across the globe. Millions of acres of land are now used for pastures, feed crops, and animal waste reservoirs. Drawing on concrete examples, the contributors to *Global Meat* explore the implications of the rise of a global meat industry for a range of social and environmental issues, including climate change, clean water supplies, hunger, workers' rights, and the treatment of animals. Three themes emerge from their discussions: the

# Online Library Cheaponomics The High Cost Of Low Prices

role of government and corporations in shaping the structure of the global meat industry; the paradox of simultaneous rising meat production and greater food insecurity; and the industry's contribution to social and environmental injustice. Contributors address such specific topics as the dramatic increase in pork production and consumption in China; land management by small-scale cattle farmers in the Amazon; the effect on the climate of rising greenhouse gas emissions from cattle raised for meat; and the tensions between economic development and animal welfare. Contributors Conner Bailey, Robert M. Chiles, Celize Christy, Riva C. H. Denny, Carrie Freshour, Philip H. Howard, Elizabeth Ransom, Tom Rudel, Mindi Schneider, Nhuong Tran, Bill Winders

Consumer society in the United States and other countries is receding due to demographic ageing, rising income inequality, political paralysis, and resource scarcity. At the same time, steady jobs that compensate employees on a salaried or hourly basis are being replaced by freelancing and contingent work. The rise of the so-called sharing economy, the growth of do-it-yourself production, and the spreading popularity of economic localization are evidence that people are striving to find new ways to ensure livelihoods for themselves and their families in the face of profound change. Indications are that we are at the early stages of a transition away from a system of social organization predicated on consumerism. These developments have prompted some policy makers to suggest providing households with a non-labor source of income that would enable more adequate satisfaction of their basic needs. These proposals include a universal basic income, a citizen's dividend, and a legal framework for broad-based stock ownership in corporations. However, extreme political fractiousness makes it unlikely that these recommendations will receive prompt and

# Online Library Cheaponomics The High Cost Of Low Prices

widespread legislative endorsement in most countries. In the meantime, we seem to be moving incontrovertibly toward a twenty-first century version of feudalism. How might we chart a different path founded on social inclusiveness and economic security? A practicable option entails establishment of networks of interlinked worker-consumer cooperatives that organizationally unify production and consumer. Such modes of mutual assistance already exist and The Future of Consumer Society profiles several successful examples from around the world. If replicated and scaled, worker-consumer cooperatives could smooth the transition beyond consumer society and facilitate a future premised on sufficiency, resiliency, and well-being.

"Over the next few decades, we will see a profound energy transformation as society shifts from fossil fuels to renewable resources like solar, wind, biomass. But what might a one hundred percent renewable future actually look like, and what obstacles will we face in this transition? Authors explore the practical challenges and opportunities presented by the shift to renewable energy."--Page 4 of cover.
