Router Trammel. Create perfect circles. For a few dollars and in just an hour or so, you can turn your router into a motorized compass. To adjust the size of circles it can cut, just move the pivot hole. Size the hole at the router end to accommodate the bit you'll be using. If you like this project, please check out our downloadable woodworking project plans at the WOOD Store .

Step 1 - Position beam trammel and router. Thread the beam trammel rod through the corresponding channel on the router's base, but don't tighten it just yet. Place the router and beam trammel on the workpiece and locate the pivot point in the indent left by the trammel heads. Apply pressure to the pivot point while turning it clockwise to screw it into the material.

[How to cut a circle or arc with a router and beam trammel](#)

To make a trammel, first remove the router's sub-base, and trace the bit opening and mounting screw locations onto a rectangular piece of hardboard, as shown in the drawing. (I like to use a piece of hardboard that is slightly wider than the base of my router.)

Router Guide: Router Tables. I can't say much about router tables as I don't personally have one. However, they can be a VERY useful tool to have-it's on my wish list. Router tables are basically a table base where you can attach a router upside down so that the router bit sticks up out of the table. Like a table saw...but for a router.

Build a trammel for your router, and you can whip out perfect circles or rings anytime. The pivot base and beam allow a wide range of size adjustments. Using 3/4" plywood for the trammel, cut out one end to match the shape of your router's base. For length, construct the jig so the beam measures about 12" longer than the radius of the largest circle you wish to cut.
