How the Ostrich Got Its Long Neck - Kenyan Tale. The continent of Africa is in a shape of a parrot and under its tail lies a country of Kenya. Kenya is home to Mount Kenya, which is the second highest mountain in Africa, after Kilimanjaro. South of Mount Kenya lives a tribe of Akamba. They are known for their exceptional woodcarving skills and story-telling.

*Geowonderland: How the Ostrich Got Its Long Neck - Kenyan Tale*

How The Ostrich Got His Long Neck Mr. Ostrich was a sober minded, serious husband, who was always willing to assist his wife in her family duties. "My Dear", he said to her one evening, when their large clutch of eggs seemed almost ready to hatch, "my black feathers can not be seen in the darkness, so I will guard our eggs by night, and at the same time keep them warm for you.

*How the Ostrich Got His Long Neck - Victoria Falls Guide*

The female common ostrich lays her fertilized eggs in a single communal nest, a simple pit, 30 to 60 cm (12-24 in) deep and 3 m (9.8 ft) wide, scraped in the ground by the male.

The earliest fossils of ostrich-like birds are Paleocene taxa from Europe. Palaeotis and Remiornis from the Middle Eocene and unspecified ratite remains are known from the Eocene and Oligocene of Europe and Africa. These may have been early relatives of the ostriches, but their status is questionable, and they may in fact represent multiple lineages of flightless paleognaths.
