Grid Resource Management: State of the Art and Future Trends presents an overview of the state of the field and describes both the real experiences and the current research available today. Grid computing is a rapidly developing and changing field, involving the shared and coordinated use of dynamic, multi-institutional resources. Grid resource management is the process of identifying requirements, matching resources to applications, allocating those resources, and scheduling and monitoring Grid resources over time in order to run Grid applications as efficiently as possible. While Grids have become almost commonplace, the use of good Grid resource management tools is far from ubiquitous because of the many open issues of the field, including the multiple layers of schedulers, the lack of control over resources, the fact that resources are shared, and that users and administrators have conflicting performance goals.

Normal Accidents analyzes the social side of technological risk. Charles Perrow argues that the conventional engineering approach to ensuring safety--building in more warnings and safeguards--fails because systems complexity makes failures inevitable. He asserts that typical precautions, by adding to complexity, may help create new categories of accidents. (At Chernobyl, tests of a new safety system helped produce the meltdown and subsequent fire.) By recognizing two dimensions of risk--complex versus linear interactions, and tight versus loose coupling--this book provides a powerful framework for analyzing risks and the organizations that insist we run them. The first edition fulfilled one reviewer's prediction that it "may mark the beginning of accident research." In the new afterword to this edition Perrow reviews the extensive work on the major accidents of the last fifteen years, including Bhopal, Chernobyl, and the Challenger disaster. The new postscript probes what the author considers to be the "quintessential 'Normal Accident'" of our time: the Y2K computer problem.

In this penetrating analysis of a little-explored area of Japanese cultural history, Timon Screech reassesses the career of the chief minister Matsudaira Sadanobu, who played a key role in defining what we think of as Japanese culture today. Aware of how visual representations could support or undermine regimes, Sadanobu promoted painting to advance his own political aims and improve the shogunate's image. As an antidote to the hedonistic ukiyo-e, or floating world, tradition, which he opposed, Sadanobu supported attempts to construct a new approach to painting modern life. At the same time, he sought to revive historical and literary painting, favouring such artists as the flamboyant, innovative Maruyama Okyo. After the city of Kyoto was destroyed by fire in 1788, its reconstruction provided the stage for the renewal of Japan's iconography of power, the consummation of the 'shogun's painted culture'. " Screech ' s ideas are fascinating, often brilliant, and well grounded. . . . [Shogun ' s Painted Culture] presents a thorough analysis of aspects of the early modern Japanese world rarely observed in such detail and never before treated to such an eloquent handling in the English language. " —CAA Reviews " [A] stylishly written and provocative cultural history. " —Monumenta Nipponica " As in his admirable Sex and the Floating World: Erotic Images in Japan 1700-1820, Screech lavishes learning and scholarly precision, but remains colloquial in thought and eminently readable. " —Japan Times Timon Screech is Senior Lecturer in the history of Japanese art at SOAS, University of London, and Senior Research Associate at the Sainsbury Institute for the Study of Japanese Arts and Cultures. He is the author of several books on Japanese history and culture, including Sex and the Floating World: Erotic Images in Japan 1700 – 1820 (Reaktion, 1999).

This title is edited by a British author from chapters written by cardiologists working in the UK. This handbook - which has been formally adopted by the Royal Brompton and Harefield NHS Trust - is a homunculus of cardiology knowledge, based on the experience of the authors with the sole aim of helping the reader make a decision when faced with the daily challenges of cardiology. Living in an age where access to the latest trial data is immediate, for many people lack of knowledge is not the problem, instead it is inadequate experience that holds them back from making a decision based on that knowledge. The Editor calls this 'evidence based paralysis'- sometimes you don't want to know what a group of experts decided in the latest trial but simply want to know what to do next. Obviously there is no substitute for experience but to help you along the way this book will help you 'get off the fence' and indicate what the authors have done in similar situations. Written by a doctor involved in every day real life cardiology, designed for all junior doctors, primary care physicians and nursing staff involved with cardiological problems Sorts the 'wheat from the chaff' and says it how it really is Designed to cure people who suffer from 'evidence based paralysis'! Content approved and adopted by two NHS Trusts Material based on national and international guidelines Deals not only with the prevailing evidence regarding 'best practice', but highlights common misconceptions and well known 'short-cuts' to try to resist! Covers ACS and first line treatment for MI in the emergency room Includes diagnostic angiography and angioplasty Addresses the primary and secondary management of MI Includes practical discussion of lipid disorders, hypertension and risk stratification Addresses heart failure, chronic valve disease and cardiomyopathies Discusses the use of pacemakers and implantable cardioverter defibrillators, heart transplant and VAD Includes common drug interactions Addresses the management of adults with congenital heart disease
