Intel became the world's largest chip maker and one of the most admired companies in the world. In *Only the Paranoid Survive*, Grove reveals his strategy for measuring the nightmare moment every leader dreads--when massive change occurs and a company must, virtually overnight, adapt or fall by the wayside--in a new way. Grove calls such a moment a Strategic Inflection Point, which can be set off by almost anything: mega-competition, a change in regulations, or a seemingly modest change in technology. When a Strategic Inflection Point hits, the ordinary rules of business go out the window. Yet, managed right, a Strategic Inflection Point can be an opportunity to win in the marketplace and emerge stronger than ever. Grove underscores his message by examining his own record of success and failure, including how he navigated the events of the Pentium flaw, which threatened Intel's reputation in 1994, and how he has dealt with the explosions in growth of the Internet. The work of a lifetime, *Only the Paranoid Survive* is a classic of managerial and leadership skills.

Under Andy Grove's leadership, Intel has become the world's largest computer chip maker, the fifth most admired company in America and the seventh most profitable company among the Fortune 500. There are moments in any business when massive change occurs, when the rules of business shift fast. Grove calls such moments strategic inflection

points (SIPS). They can be set off by almost anything from mega-competition to a seemingly modest change in technology. Intel's first SIP was when the Japanese started producing better-quality, lower-cost memory chips. It took Grove three years and huge losses to recognize that he had to rethink and reposition the company if it was to become, once again, a leader in its field. Grove extrapolates the lessons he has learned from this and other SIPs to reveal an insight into the management of change. He recounts strategies from other companies and examines his own record of success and failure.

Under Andy Grove's leadership, Intel has become the world's largest chipmaker, the fifth-most-admired company in America, and the seventh-most-profitable company among the Fortune 500. You don't achieve rankings like these unless you have mastered a rare understanding of the art of business and an unusual way with its practice. Few CEOs can claim this level of consistent record-breaking success. Grove attributes much of this success to the philosophy and strategy he reveals in *Only the Paranoid Survive*--a book that is unique in leadership annals for offering a bold new business measure, and for taking the reader deep inside the workings of a major corporation. Grove's contribution to business thinking concerns a new way of measuring the nightmare moment every leader dreads--the moment when

massive change occurs and all bets are off. The success you had the day before is gone, destroyed by unforeseen changes that hit like a stage-six rapid. Grove calls such moments Strategic Inflection Points, and he has lived through several. When SLPs hit, all rules of business shift fast, furiously, and forever. SLPs can be set off by almost anything--megacompetition, an arcane change in regulations, or a seemingly modest change in technology. Yet in the watchful leader's hand, SLPs can be an ace. Managed right, a company can turn a SIP into a positive force to win in the marketplace and emerge stronger than ever. To achieve that level of mastery over change, you must know its properties inside and out. Grove addresses questions such as these: What are the stages of these tidal waves? What sources do you turn to in order to foresee dangers before trouble announces itself? When threats abound, how do you deal with your emotions, your calendar, your career--as well as with your most loyal managers and customers, who may cling to tradition? No stranger to risk, Grove examines his own record of success and failure, including the drama of how he navigated the events of the Pentium flaw, which threatened Intel in a major way, and how he is dealing with the SIP brought on by the Internet. The work of a lifetime of reflection, *Only the Paranoid Survive* is a contemporary classic of leadership skills.

The real story of what it takes to risk it all and go for broke. Conventional wisdom says most startups need to be in Silicon Valley, started by young engineers around a sexy new idea, and backed by VC funding. But as Mikkel Svane reveals in *Startupland*, the story of founding Zendesk was anything but conventional. Founded in a Copenhagen loft by three thirty-something friends looking to break free from corporate doldrums, Zendesk Inc. is now one of the hottest enterprise software companies, still rapidly growing with customers in 150 countries. But its success was anything but predestined. With revealing stories both funny and frank, Mikkel shares how he and his friends bravely left secure jobs to start something on their own, how he almost went broke several times, how they picked up themselves and their families to travel across the world to California and the unknown, and how the three friends were miraculously still together for Zendesk's IPO and (still growing) success. Much like Zendesk's mission itself—to remove friction, barriers, and mystery in order to make customer service easier and more approachable—*Startupland* removes some of the myths about startups and startup founders. Mikkel's advice, hard-won through experience, often bucks conventional wisdom and entrepreneurial tropes. He shares why failure (whether fast or slow) is awful, why a seemingly boring product or idea can be the most exciting, why giving back to the community is as important as the bottom line. From how to

hire right (look for people who aren't offended by swearing) to which personas generate the highest response rates, Mikkel answers the most pressing questions from the perspective of someone still in the trenches and willing to share the hard truth, warts and all. While there are books by consultants who tell you how to build businesses, or by entrepreneurs now running billion-dollar businesses, there are few books from people still in the trenches who acutely remember the difficult daily decisions, the thrill (and fears) of the early days, the problems that scale with growing a business, and the reason why they all went on the adventure in the first place. *Startupland* is indispensable reading for all entrepreneurs who want to make their ideas the next big thing. The book will inspire and empower you to follow your own dream and create your own story.

Traces the life and career of the enigmatic former CEO of Intel, drawing on private papers and interviews with his closest friends and associates to discuss such topics as the persecution he survived as a Hungarian Jew in the 1930s, his relationships with such figures as Gordon Moore and Robert Noyce, and his management talents. Reprint. 50,000 first printing.

For the first time at book length, bestselling author and economist Jeff Rubin addresses Canada's national economic future - and the financial security of all Canadians. Since 2006 and the election of the first Harper government, the vision of Canada's future as an energy superpower has driven the political agenda, as well as the fast-paced development of Alberta's oil sands and the push for more pipelines across the country to bring that bitumen to market. Anyone who objects is labeled a dreamer, or worse--an environmentalist: someone who puts the health of the planet ahead of the economic survival of their neighbours. In *The Carbon Bubble*, Jeff Rubin compellingly shows how Harper's economic vision for the country is dead wrong. Changes in energy markets in the US - where domestic production is booming while demand for oil is shrinking - are quickly turning Harper's dream into an economic nightmare. The same trade and investment ties to oil that pushed the Canadian dollar to record highs are now pulling it down, and the Toronto Stock Exchange, one of the most carbon-intensive stock indexes in the world - with over 25 percent market capitalization in oil and gas alone - will be increasingly exposed to the rest of the world's efforts to reduce

carbon emissions. Rubin argues that there is a lifeline to a better future. The very climate change that will leave much of the country's carbon unburnable could at the same time make some of Canada's other resource assets more valuable: our water and our land. In tomorrow's economy, he argues, Canada won't be an energy superpower, but it has the makings of one of the world's great breadbaskets. And in the global climate that the world's carbon emissions are inexorably creating, food will soon be a lot more valuable than oil.
