Spinal disorders in very young children may be caused by a variety of conditions. The treatment of such conditions is often challenging due to the age of the patient and the progressive nature of the deformity. There also may be associated problems such as congenital anomalies, respiratory insufficiency, and neurological problems.

## ~~The Growing Spine: Management of Spinal Disorders in Young ...~~

Between 3% and 25% of spinal cord injuries occur after the initial trauma, either during transportation or early in the course of management.<sup>5</sup> The probability of a non-contiguous spinal injury in the setting of a known injury is approximately 20%,<sup>5</sup> necessitating the need for complete spinal immobilisation for any suspected SCI. Although there is no class I or II evidence supporting the use of ...

of the back that normally support a flexible, growing spine is a major problem in childhood-onset SMA. If it's not corrected, the child may develop scoliosis — a side-to-side curvature of the spine — or kyphosis, a forward curvature of the spine, or both ...

~~Diseases – SMA – Medical Management | Muscular Dystrophy ...~~

Plain radiographs of the lumbar spine have a limited role (unless there is a 'red flag' indication), and all published guidelines recognise this. ... Management of acute back pain is essentially different from that of chronic back pain. Keefe has suggested a number of potential key features in the development of chronic back pain (Figure 3).
