Violence against women is one factor in the growing wave of alarm about violence in American society. High-profile cases such as the O.J. Simpson trial call attention to the thousands of lesser-known but no less tragic situations in which women's lives are shattered by beatings or sexual assault. The search for solutions has highlighted not only what we know about violence against women but also what we do not know. How can we achieve the best understanding of this problem and its complex ramifications? What research efforts will yield the greatest benefit? What are the questions that must be answered? Understanding Violence Against Women presents a comprehensive overview of current knowledge and identifies four areas with the greatest potential return from a research investment by increasing the understanding of and responding to domestic violence and rape: What interventions are designed to do, whom they are reaching, and how to reach the many victims who do not seek help. Factors that put people at risk of violence and that precipitate violence, including characteristics of offenders. The scope of domestic violence and sexual assault in America and its consequences to individuals, families, and society, including costs. How to structure the study of violence against women to yield more useful knowledge. Despite the news coverage and talk shows, the real fundamental nature of violence against women remains unexplored and often misunderstood. Understanding Violence Against Women provides direction for increasing knowledge that can help ameliorate this national problem.

Women have made significant inroads into political life in recent years, but in many parts of the world, their increased engagement has spurred attacks, intimidation, and harassment. This book provides the first comprehensive account of this phenomenon, exploring how women came to give these experiences a name: violence against women in politics. Tracing its global emergence as a concept, Mona Lena Krook draws on insights from multiple disciplines--political science, sociology, history, gender studies, economics, linguistics, psychology, and forensic science--to develop a more robust version of this concept to support ongoing activism and inform future scholarly work. Krook argues that violence against women in politics is not simply a gendered extension of existing definitions of political violence privileging physical aggressions against rivals. Rather, it is a distinct phenomenon involving a broad range of harms to attack and undermine women as political actors, taking physical, psychological, sexual, economic, and semiotic forms. Incorporating a wide range of country examples, she illustrates what this violence looks like in practice, catalogues emerging solutions around the world, and considers how to document this phenomenon more effectively. Highlighting its implications for democracy, human rights, and gender equality, the book asserts that addressing this issue requires ongoing dialogue and collaboration to ensure women's equal rights to participate--freely and safely--in political life around the globe.

This book shows how violence against woman can be seen, known and represented on the world stage and in psychoanalytic treatment. It brings psychoanalytic ideas and understanding in an effort to comprehend violence against women.

Violence against women is a violation of women's human rights and a priority public health issue. It is endemic worldwide. While much has been written about it in industrialized societies, there has been relatively little attention given to such violence in Asian societies. This book addresses the structural and interpersonal violences to which women are subject, both under conditions of conflict and disruption, and where civil society is relatively ordered. It explores sexual violence and coercion, domestic violence, and violence within the broader community and the state, avoiding sensationalised accounts of so-called cultural' practices in favour of nuanced explorations of violences as experienced in Cambodia, Thailand, Burma, Indonesia, Malaysia, the Philippines, Bangladesh, and India.

In 2015, the Australian federal government proclaimed that violence against women had become a national crisis. Despite widespread social and economic advances in the status of women since the 1970s, including growing awareness and action around gender violence, its prevalence remains alarming. A third of all women in Australia have been assaulted physically; a fifth of all women have been assaulted sexually. Intimate partner violence is significantly more prevalent in Australia than western Europe or North America. One woman each week is murdered by an intimate partner, and recent research suggests that nearly forty per cent of all women who suicide have a history of domestic or family violence. Domestic violence is a precipitating factor in a third of all homelessness. The resulting strain on government services and lost productivity means that family violence has been estimated as costing the Australian economy around 13.6 billion dollars a year. The histories presented in this collection indicate exactly where these violent behaviours come from and how they have been rationalised over time, offering an important resource for addressing what amounts to a widespread, persistent, and urgent social problem.

Are laws the answer to achieving gender equality? What are the complex inter-actions of civil, religious, and customary laws that shape women's status? What are the ways in which laws reflect and reinforce social and cultural norms and expectations? Will the enactment of laws to protect and promote the rights of women result in improving the status of women in Asia? This publication provides a discussion of these complex issues and offers some answers to these questions.
