Since the publication of the Institute of Medicine (IOM) report Clinical Practice Guidelines We Can Trust in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality

(AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement

of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.

`A welcome addition to the series. The co-authors... have endeavoured to give a thorough and practical guide to this vast subject and they have managed to do this within the confines of an easy-to-read, cheap and relatively short paperback... a very useful practical volume for the general counsellor to have on their book shelf' - Counselling, The Journal of the British Association for Counselling and Psychotherapy This comprehensive guide views stress counselling and management from a multimodal perspective. Clear guidelines show practitioners how they can give their clients the most effective help for their stress problems using a technically eclectic and systematic approach. The authors discuss the symptoms and causes of stress and outline a framework in which stress problems can be understood. They emphasize the importance of assessment as a guide to the selection of multimodal interventions and of tailoring the counselling approach for each client. Chapters discuss the range of interventions that can be used - cognitive, imagery, behavioural, sensory, interpersonal and health/lifestyle - and the most useful techniques that can be employed within these models, such as disputing irrational beliefs, coping imagery, psychodrama, relaxation training and assertion training. Case examples illustrate commonly used techniques.

The authors introduce an analysis and design method customized to form-based enterprise applications, the predominant type of business application. The text provides a comprehensive introduction to form-based

systems, explaining their common properties and giving at the same time a hands-on introduction to the modeling of such systems. Form-based enterprise applications are modeled by a bipartite state machine and a tiered data model as a class diagram. The modeling method is explained with the TCW-3 online bookshop as a running example, in which the user can experience the modeling concepts in action.
